

# Prototypes

Authors: Edgar Chen, Tom Wildenhain

You stumble into what seems to be the final room, but there’s nothing you can interact with—no buttons, no moving panels, nothing at all! Instead, there are just a bunch of advertising posters for prototype Aperture Science products, with their names in CAPITAL LETTERS. You notice that each one has a number of portals of various shapes and sizes going through it. The portals themselves don’t really lead anywhere... How do you solve this room?

Puzzle	Answer	Advertisement Text
Contact		This stationery is our newest invention in message concealment. Its color is so dark that it renders any message written on it completely unreadable!
SPAAAAAAAAAAAAAAAAAAACE		An entry in Aperture’s latest lineup of weapons, this one is a pole, but we’ve taken the liberty of adding a sharp metal tip to one end to make it more dangerous to your enemies. We’ve also coated the tip with a cool, refreshing paste, so your opponents can savor the flavor as you impale them.
Engineer’s Notes		Ever wanted to go for a swim but didn’t want to leave your vehicle? Now you can! Just drive right up to our motor-friendly water containment facility.
How have you been		As a complement to last year’s “Fold it yourself” gun, which could only fire 1 shot at a time, we’ve created a new companion product! This product, also available as a “Fold it yourself”, holds 5 bullets together in an easy-to-load configuration.
Reverse Engineering		Introducing the latest in self defense (and offense) technologies, this device crafted carefully from part of a broken off tree branch delivers a hit on the wrist or on the cheek to your adversaries, available only from Aperture Science.
Aerial Shot		Speed and efficiency are hallmarks of Aperture Science’s operations. After consuming this powder rich in silicon dioxide, your days are sure to pass rapidly.
Assembly Required		Living on the edge too much for you? Want some extra security? With this new innovation, you can grab on and narrowly avoid your perilous death! Or will you?
The Cake is a Lie		Tired of looking up at your clock, or holding out your wrist to look at your watch? Aperture Science is bringing this device powered by high-quality quartz crystals straight to the dining room! Now you’ll just have to look below your plate to know exactly how late you’re going to be to work.
